

$$\sin^2\theta + \cos^2\theta = 1 \quad 1 + \tan^2\theta = \sec^2\theta \quad \sec^2\theta - 1 = \tan^2\theta$$

x	sin x	cos x
0	0	1
$\frac{\pi}{6}$	$\frac{1}{2}$	$\frac{\sqrt{3}}{2}$
$\frac{\pi}{4}$	$\frac{\sqrt{2}}{2}$	$\frac{\sqrt{2}}{2}$
$\frac{\pi}{3}$	$\frac{\sqrt{3}}{2}$	$\frac{1}{2}$
π	0	-1

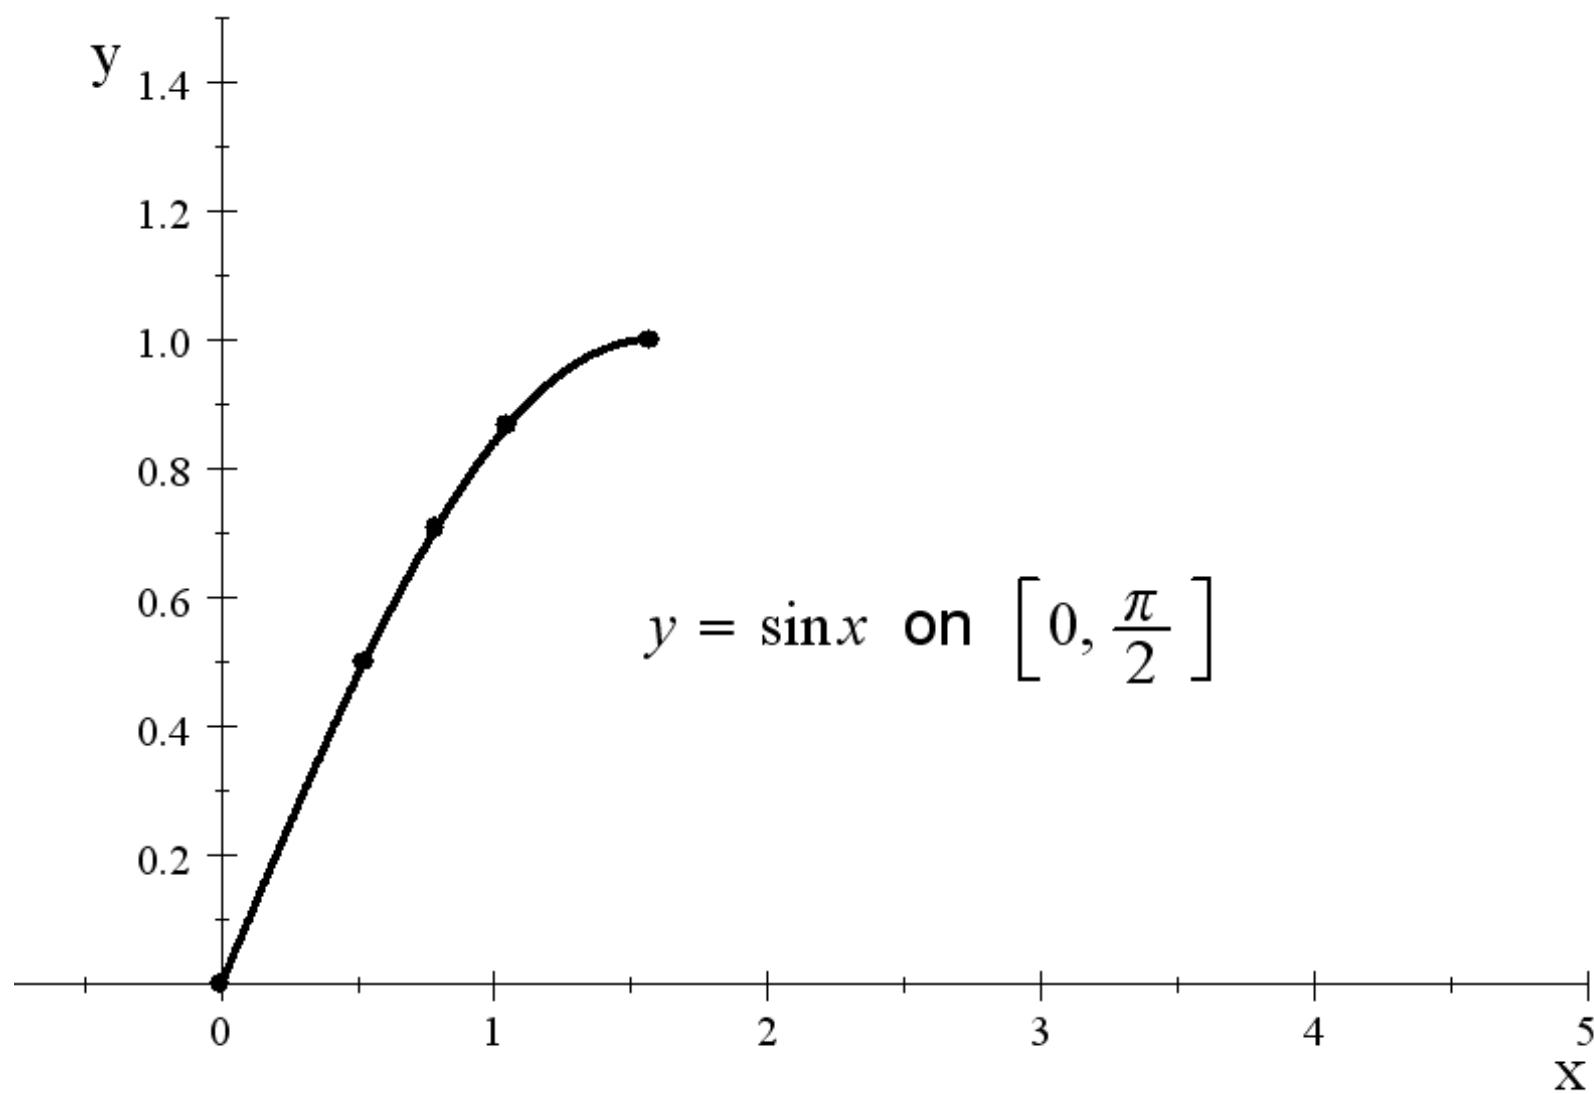

$$(0,0) \quad \left(\frac{\pi}{6},\frac{1}{2}\right) \quad \left(\frac{\pi}{4},\frac{\sqrt{2}}{2}\right) \quad \left(\frac{\pi}{3},\frac{1}{2}\right) \quad \left(\frac{\pi}{2},1\right)$$

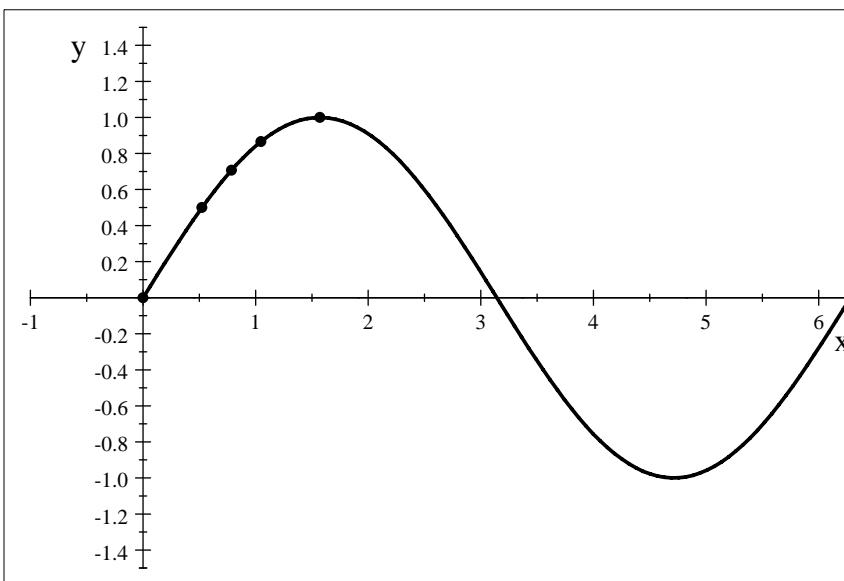

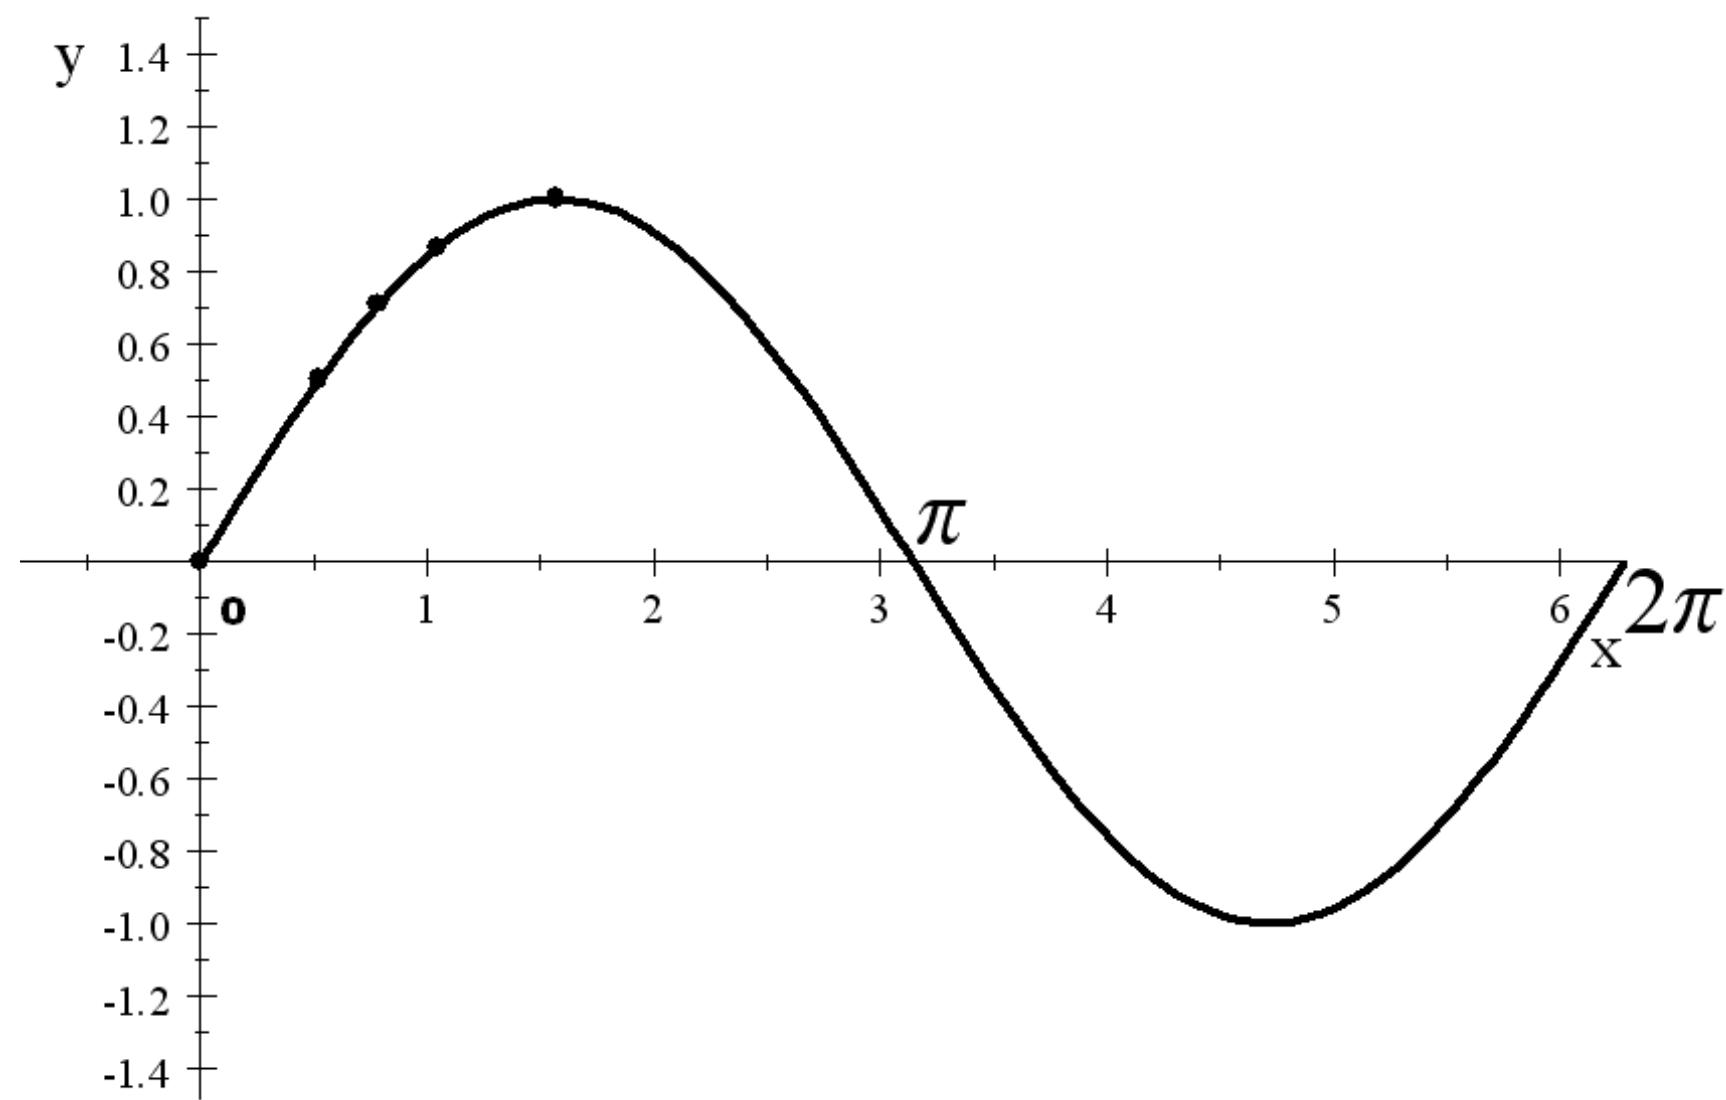

$$y = \sin x \text{ on } \left[0, \frac{\pi}{2}\right]$$

Using the other values, we can complete the graph on $[0, 2\pi]$

as follows

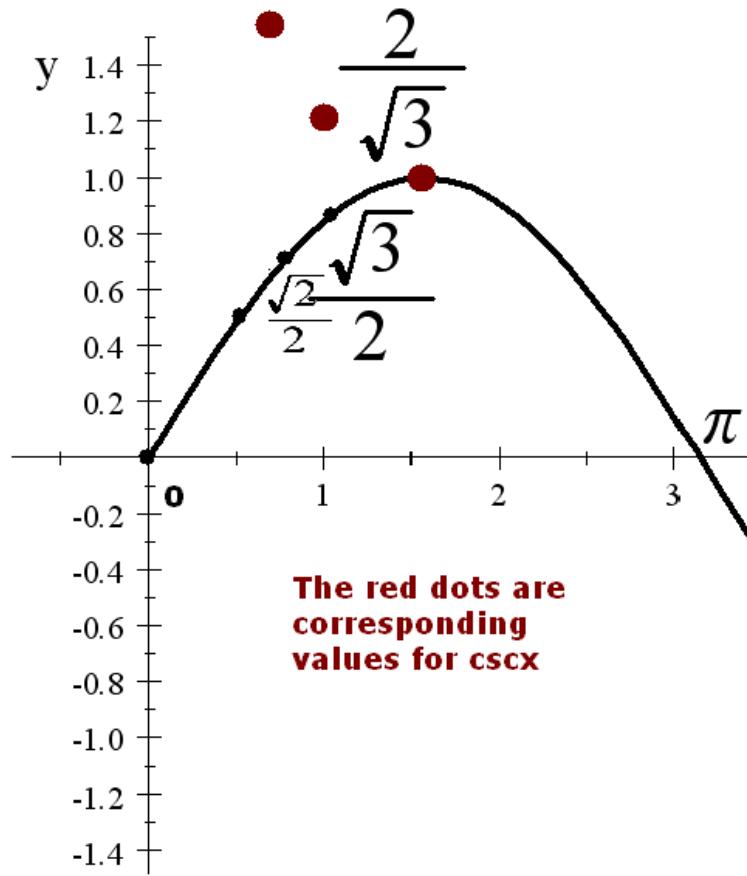

$$\csc x = \frac{1}{\sin x}$$

The function $f(x) = \sin x$ has a period of 2π

that is $f(x + 2\pi) = \sin(x + 2\pi) = \sin x = f(x)$

Similarly, $f(x) = \cos x$ has a period of 2π

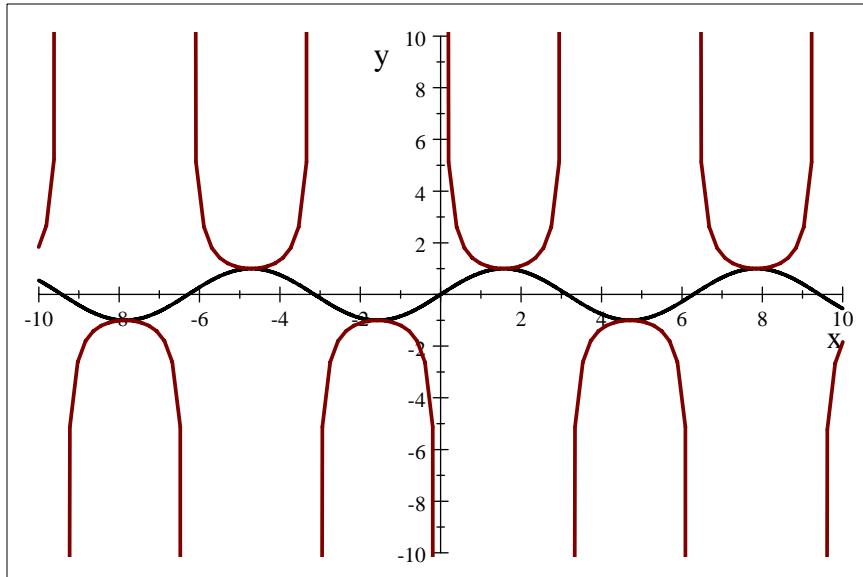

$$2/\sqrt{2}$$

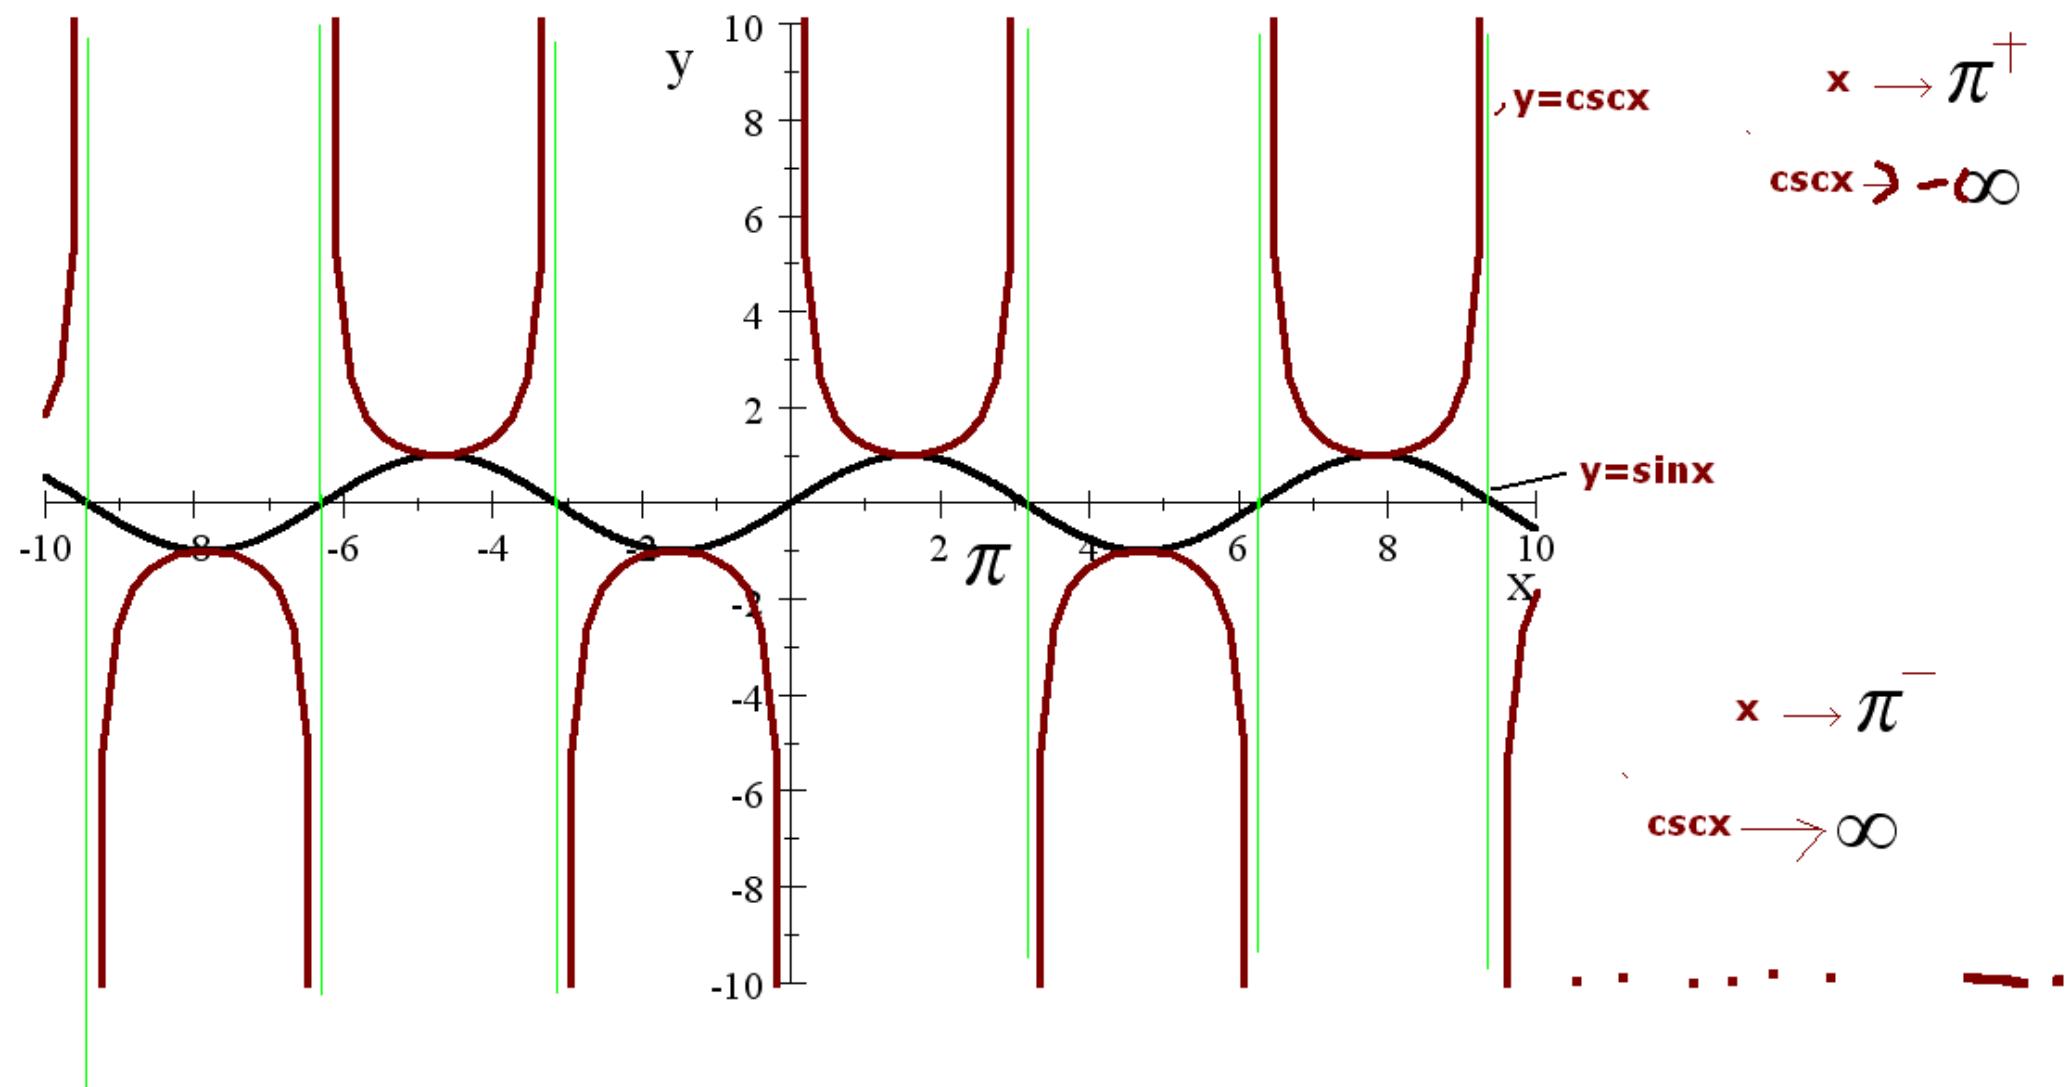

$$\csc x = \frac{1}{\sin x}$$

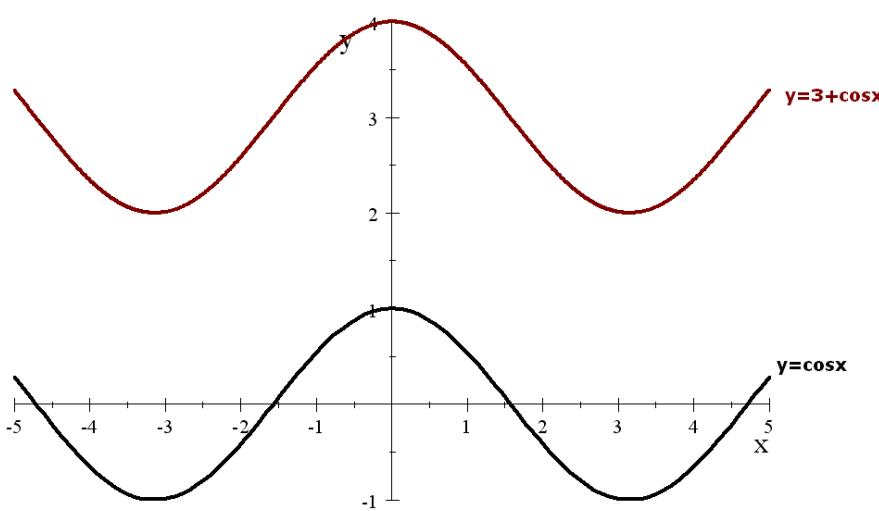

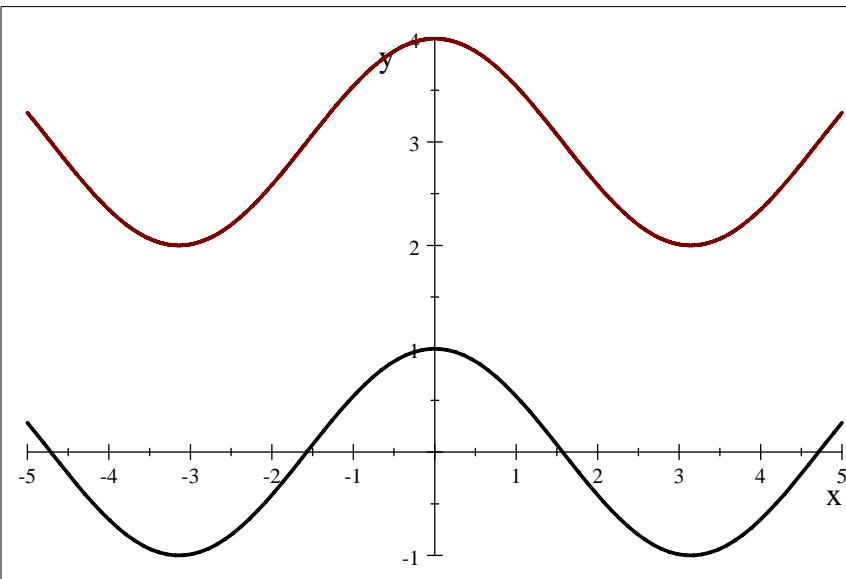

$$\sin x \quad \frac{1}{2} \quad 2$$

$\sin x$

$\cos x$

Calculator Corner

When working with the TRIG functions, make sure to check whether you are in the degree mode or in the radian mode

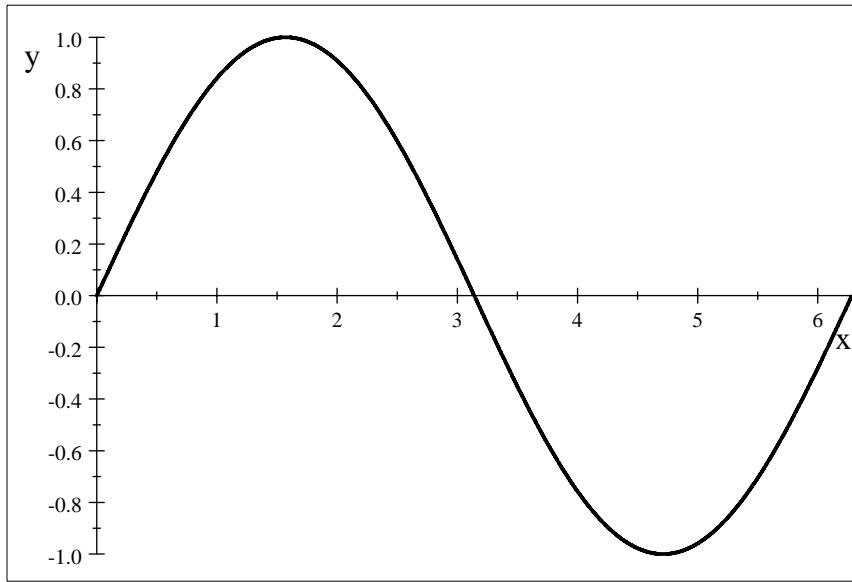

$$\sin 30^\circ = \frac{1}{2}$$

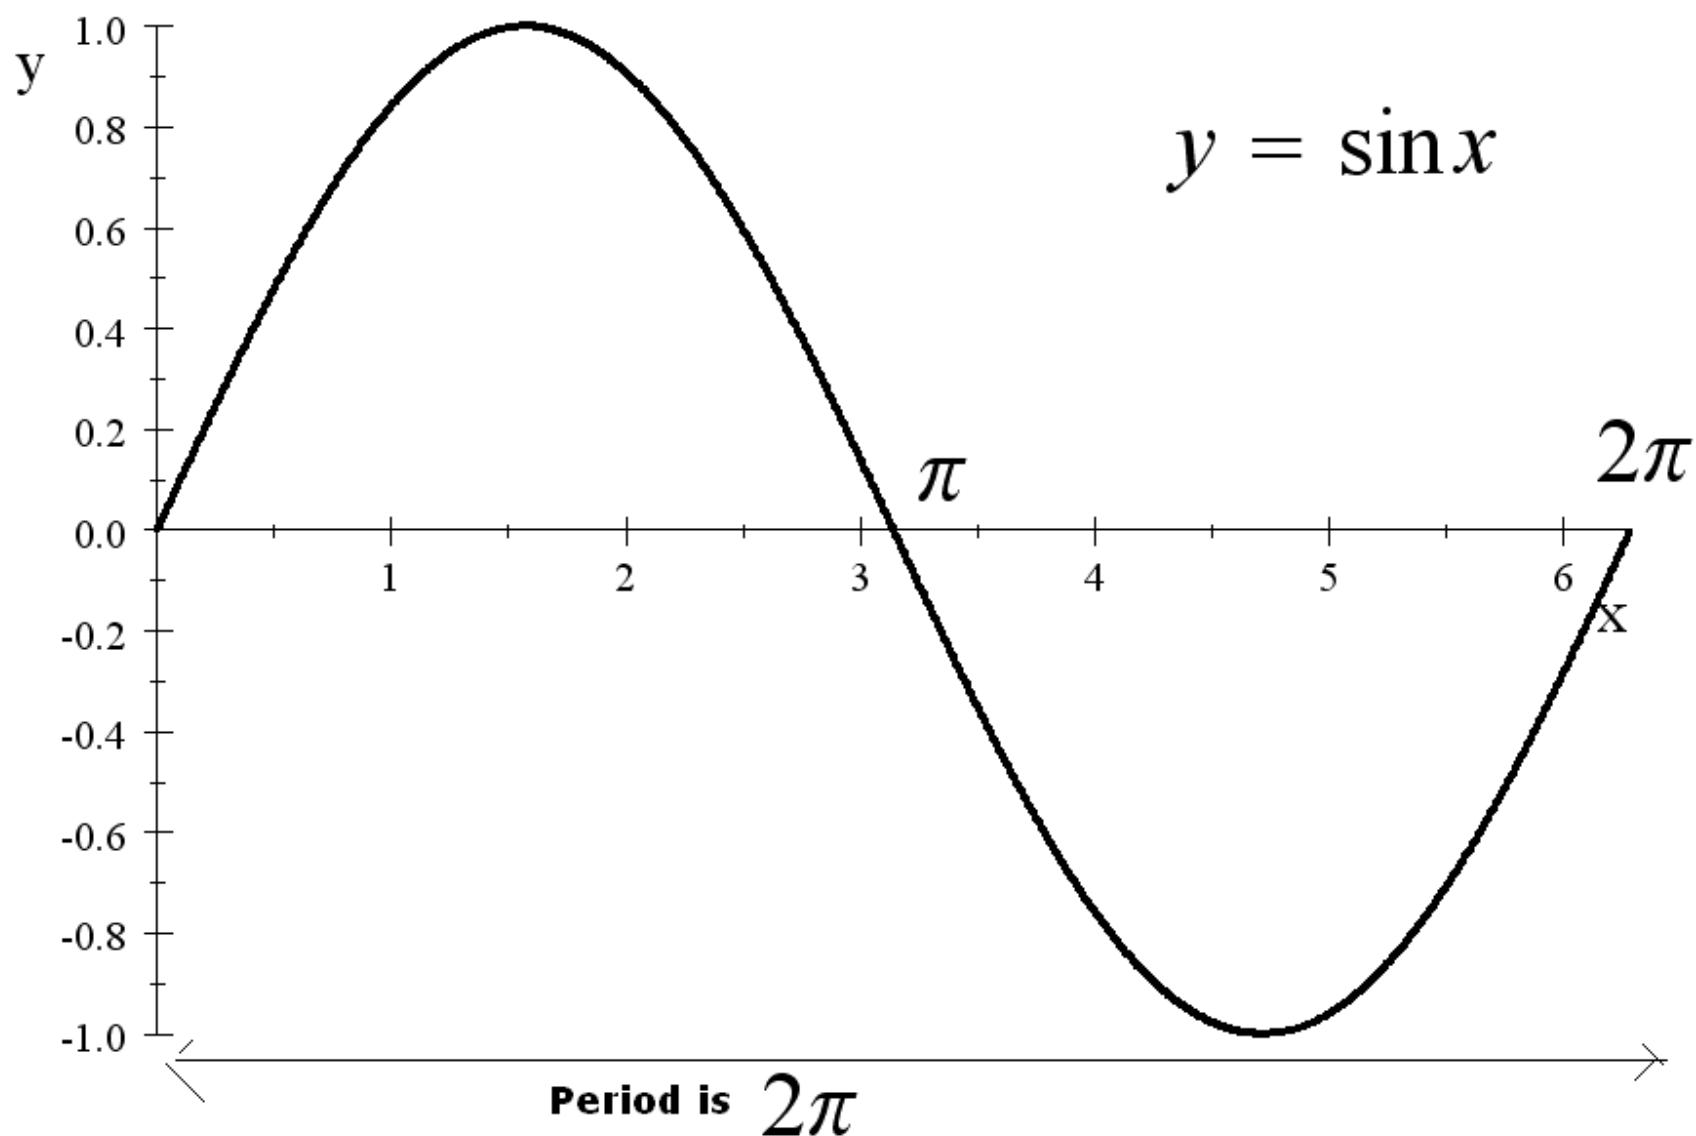

$$\sin 30 = -0.988$$

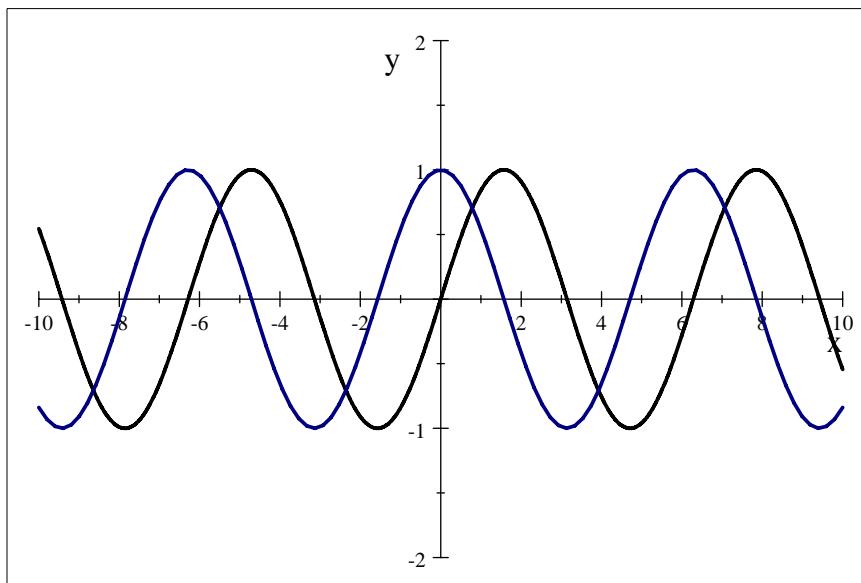

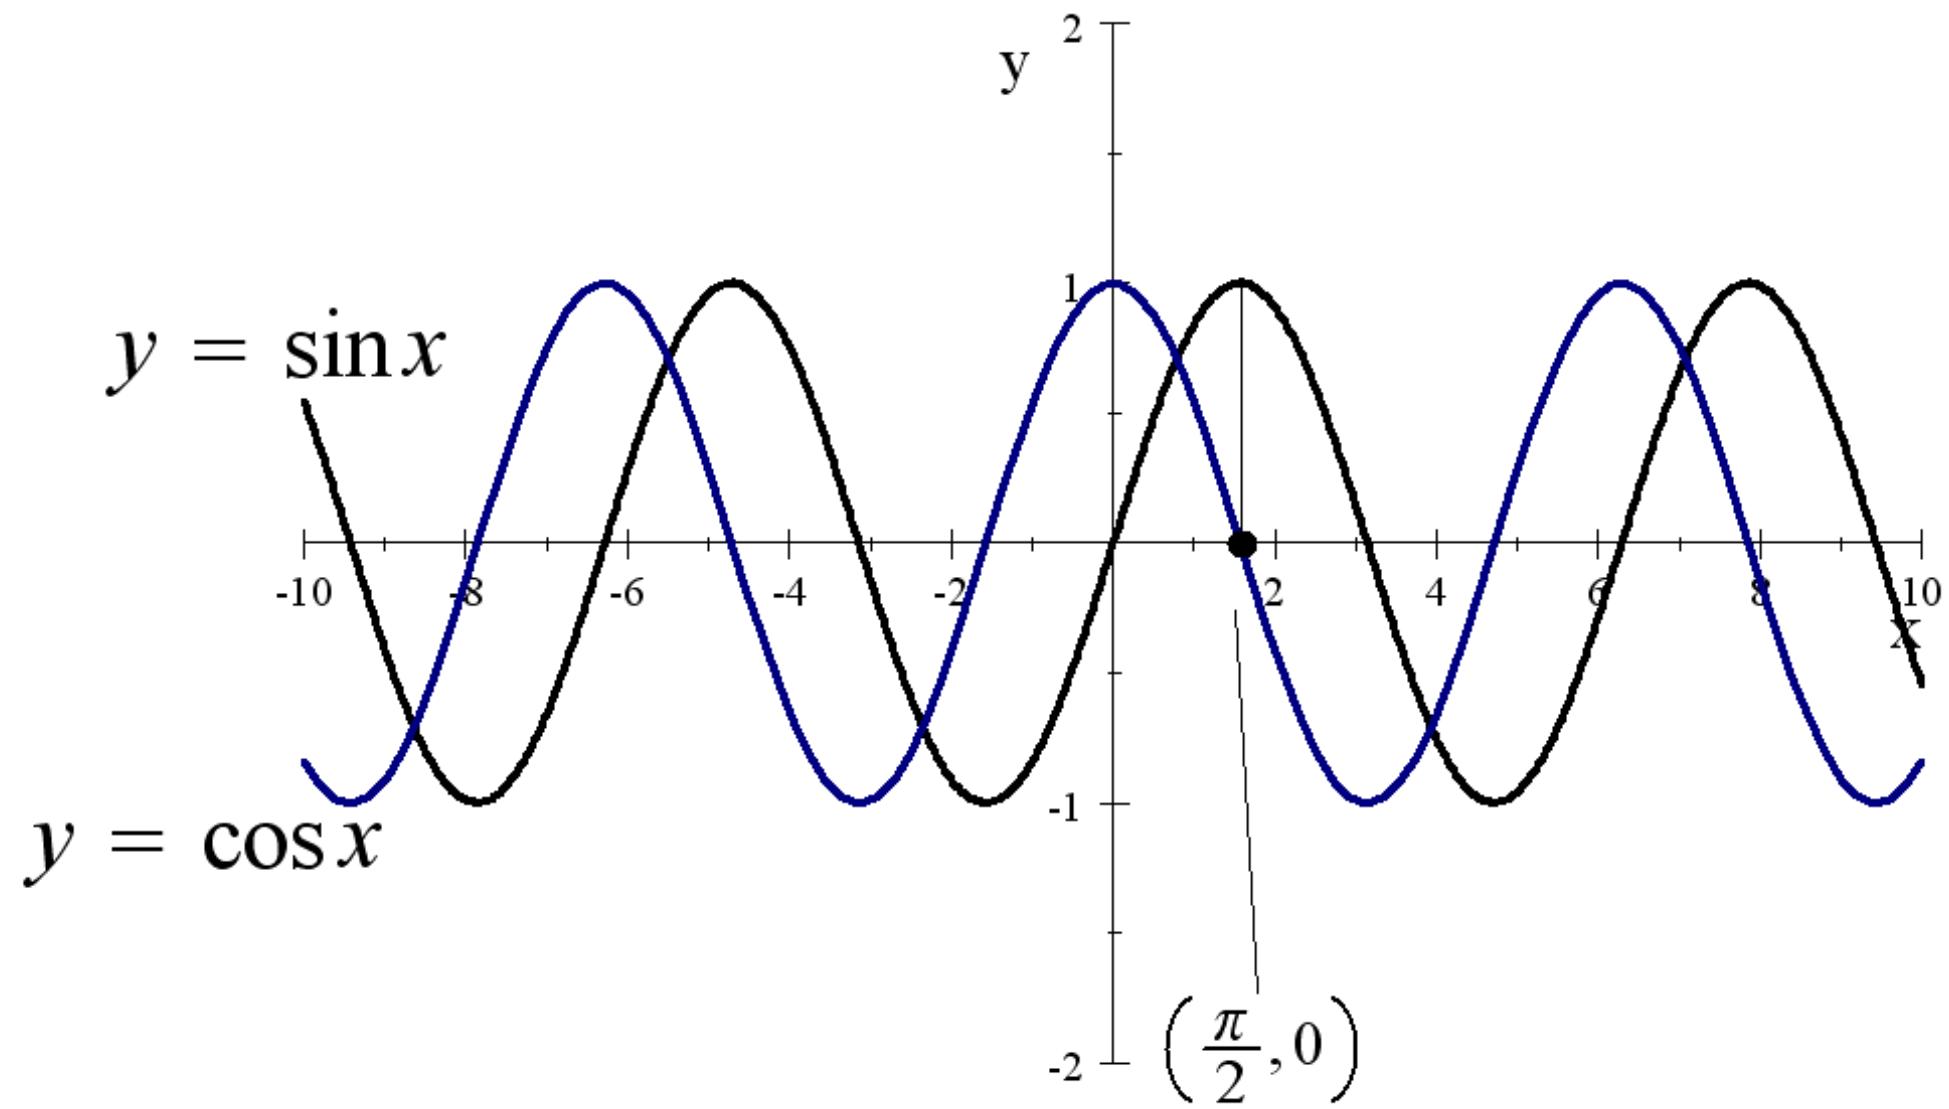

$$y = \cos x$$

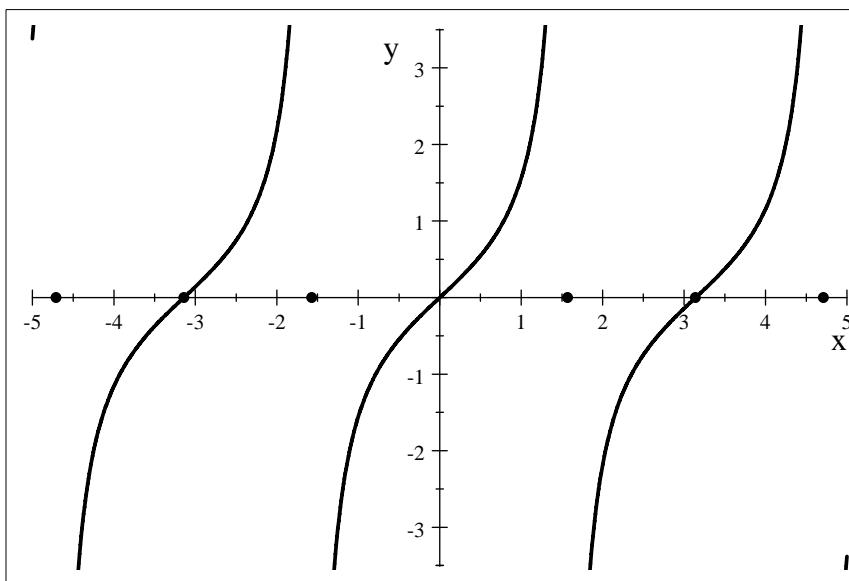

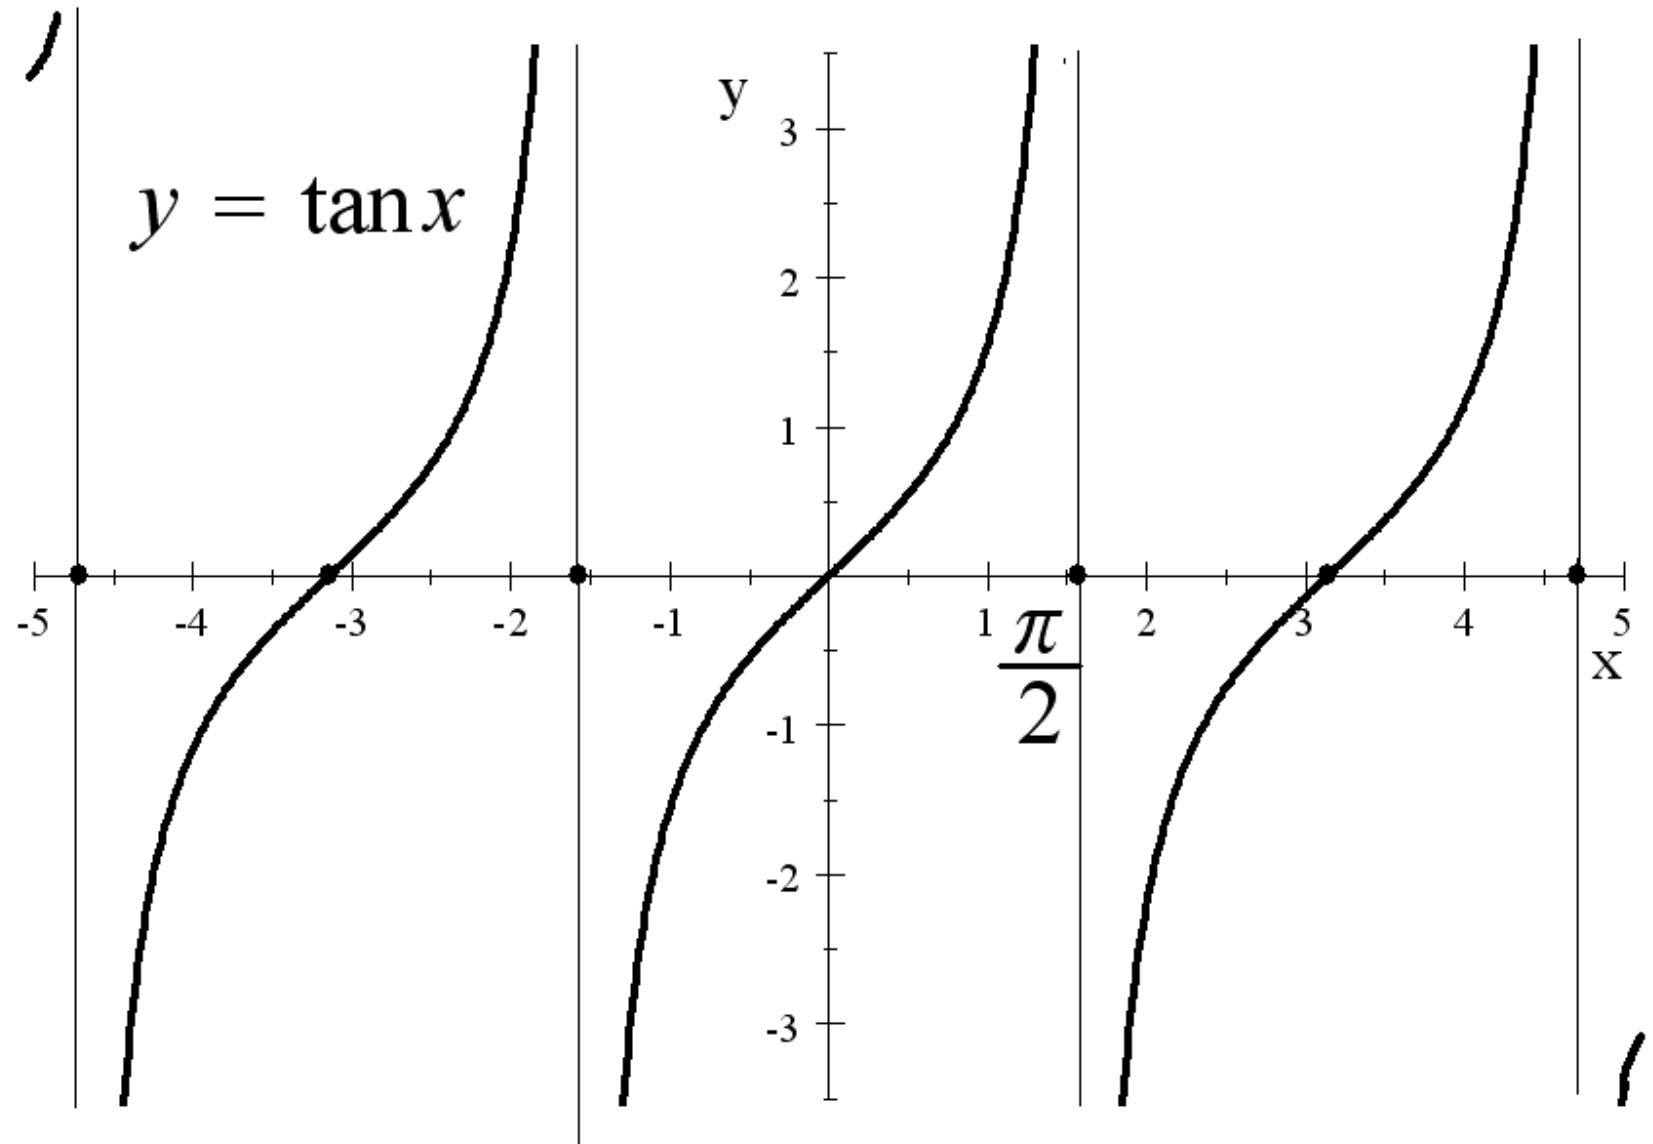

$\sin x$

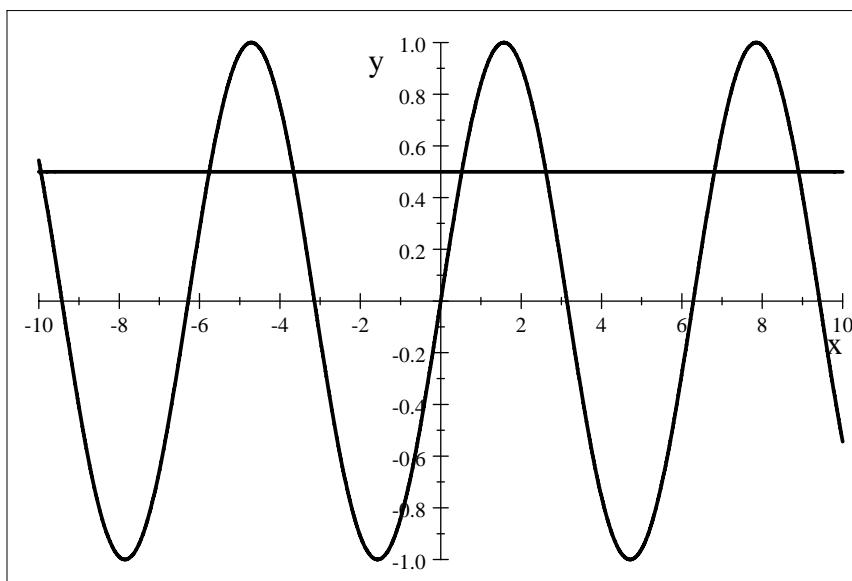

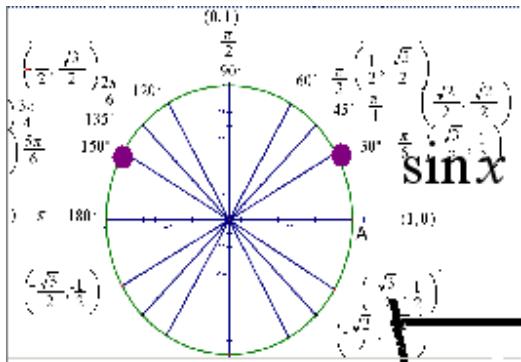

$$y = \tan x$$

Solving Equations

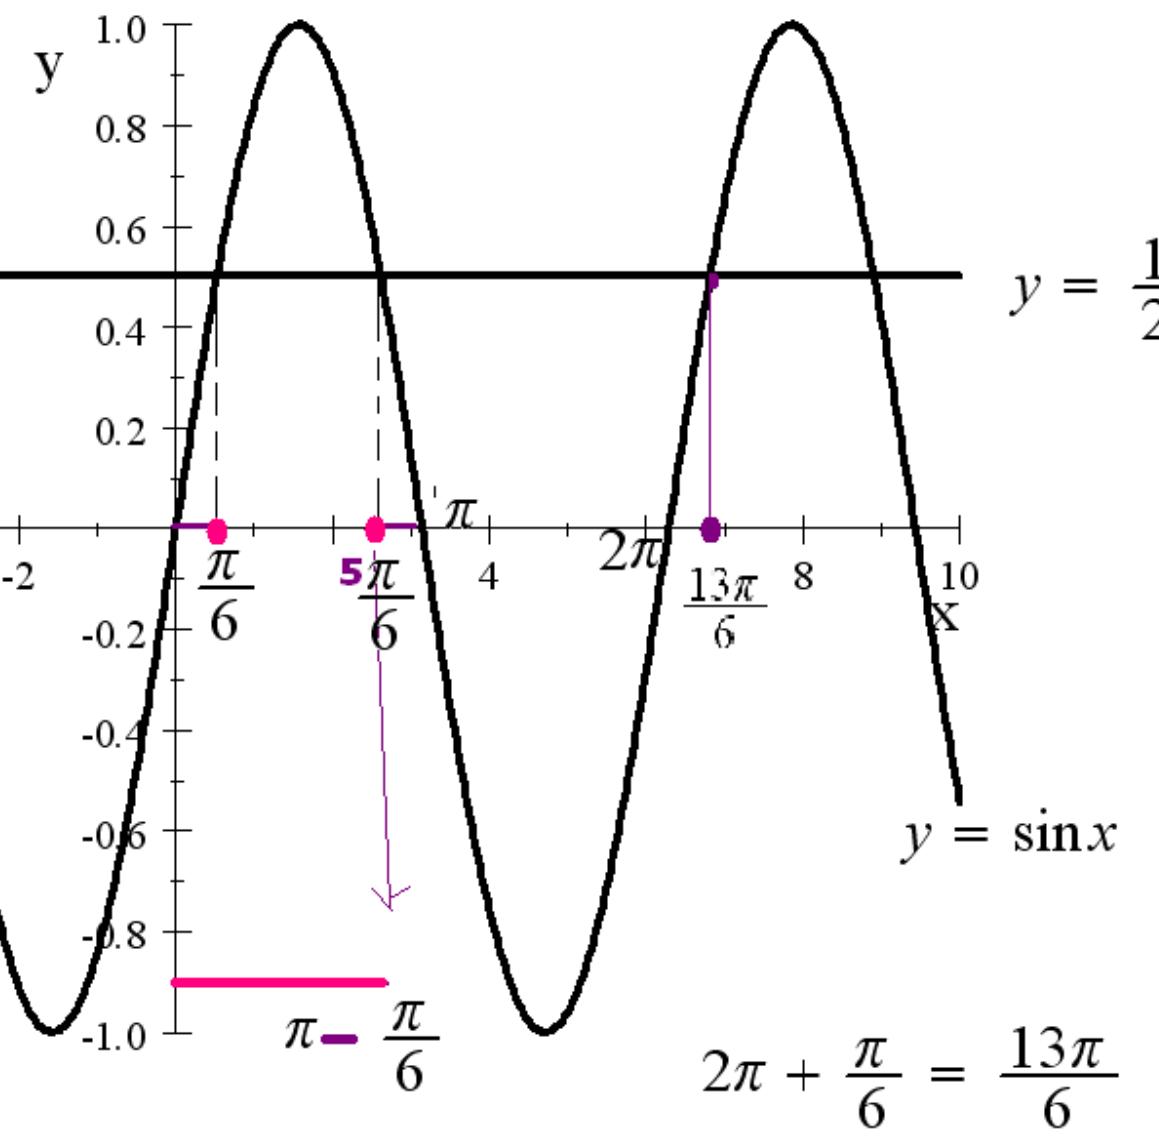

1. $\sin x = \frac{1}{2}$

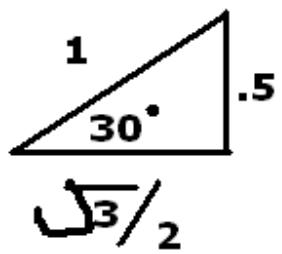

$$\sin x = \frac{1}{2}$$

-10 -8 -6 -4 -2

$$y = \sin x$$

$$2\pi + \frac{\pi}{6} = \frac{13\pi}{6}$$

Solutions are

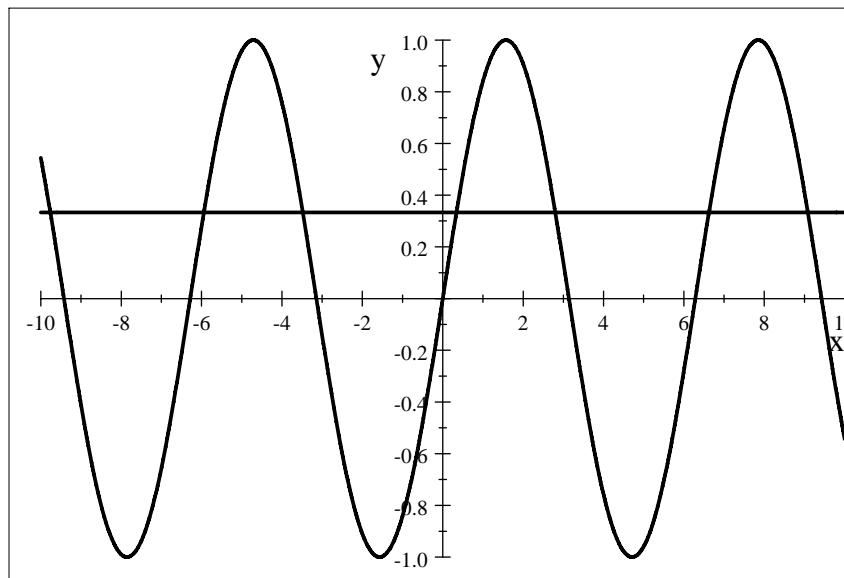

$$\frac{\pi}{6} + 2n\pi$$

$$\frac{5\pi}{6} + 2n\pi$$

Example 2:

Solve:

$\sin x = \frac{1}{3}$, you MAY round the answers to two digits after the decimal

$$y = \sin x$$
